## **GIUDE FOR AUTHORS**

Juraj Dobrila University of Pula Faculty of Economics and Tourism "Dr.Mijo Mirković" Preradovićeva 1/1, 52100 Pula, Croatia

### DESCRIPTION

Review of Innovation and Competitiveness (RIC) publishes both theoretical and applied research with an emphasis on topics in international trade, factors conditions, demand conditions, firm strategy, structure and rivalry, human resource endowments, R&D capabilities, new technology adoption, managerial and organizational factors, models and process of innovation, innovation law and policy, innovation networks, technical change, marketing innovation, clusters and networks and other topics falling within the field of economics of innovation.

RIC is not tied to any particular strand of theory, academic discipline, or subject of research in the field of economic science investigating economics of innovation and competitiveness.

RIC will endeavor to provide concise and accessible review on most important technical, socio-economic factors driving information technology industries.

In pursuit of its program RIC will try to explain what is happening in the race for global innovation advantage, explain economic decline in the most developed economies of the 21st century, change and dynamics in the innovation and innovation polices worldwide, building innovation advantage in order to overcome barriers to innovation.

### **GUIDE FOR AUTHORS**

### INTRODUCTION

The Journal Scope regards to both theoretical and applied research, and is not tied to any particular strand of theory, academic discipline, or subject of research in the field of economic science investigating economics of innovation and competitiveness. Papers regarding review of most important technical, socio-economic factors driving information technology industries are very welcome, as well as any contributions to explaining what is happening in the race for global innovation advantage, explaining economic decline in the most developed economies of the 21st century, change and dynamics in the innovation and innovation polices worldwide, building innovation advantage in order to overcome barriers to innovation.

### BEFORE YOU BEGIN

Ethics in publishing. Peer - reviewed process is a cornerstone of the current academic community. It reflects the quality of the papers and their authors' knowledge. Peer-reviewed articles support and embody the scientific method. So, it is important to agree regarding the standards of expected ethics in publishing.

**Duties of authors:** originality of submitted paper, authorship of submitted paper, acknowledgement of sources, avoid disclosure and conflicts of interest (including any financial, personal or other relationships that could inappropriately influence, or be perceived to negatively influence other persons or organizations), avoid fundamental errors in papers, avoid multiple/concurrent submissions and publications, respect reporting standards.

**Duties of reviewers:** contribution to editorial decision, check the originality of the paper, check the quality of the paper, submit quality and useful comments for authors, objectivity, confidentiality, avoid the conflict of interest.

**Duties of editors:** making fair publication decision, assigning reviewers, promptly notify the authors on reviewer's opinion, involvement in final paper publication adjustments but not more than 10% of the submitted paper, confidentiality.

### **SUBMISSION**

Submitted paper must have not been previously published (except in the form of an abstract or conference abstract), and not submitted for publication elsewhere. Also, the submitted paper must be approved by all authors (if there are more than one author). If the paper is accepted, it will not be published anywhere else in the same form in any language without the consent of the copyright holder. By submitting the paper, authors accept all the terms from this document.

### COPYRIGHT CC-BY

Subscribers are allowed to reproduce parts of the article but only with appropriate reference to the paper/journal. Other forms of resale, derivative work, publication or compilations as well as translations are not allowed without the publisher's consent.

Authors are allowed to use their published articles for personal promotion in academic society (such as uploading the paper to academic social networks or formal data bases). If authors wish to replicate parts of their paper published in RIC, they have to include the appropriate reference.

### **OPEN ACCESS**

Articles are available online to the wide audience. There is no publication fee for the online open access publication.

### SUBSCRIPTION

Articles are available online at <u>Review of Innovation and Competitiveness</u> site. The subscription is possible for the printed edition, and it is 200 Kuna per a Year (four editions).

### **DOUBLE - BLIND PEER REVIEW**

Review of Innovation and Competitiveness uses double-blind review, which means that the identities of the authors are concealed from the reviewers, and vice versa.

To enable this, it is necessary to distinguish the Submission template and Final paper template. Submission Template should be submitted without the author's names (there is a cover letter template which authors should fill in with personal data). Final paper template should be submitted after the author is notified about paper acceptance from the editors. For details, check the templates – pack.

### ARTICLE STRUCTURE

We encourage "Your Paper - Your Way" system, which enables the authors to choose any structure they find fit to properly represent their research in the article. There are differences between quantitative and qualitative papers, as well as between reviews, preliminary papers and original research papers. However, authors should still comply basic requirements of a scientific paper: offer solid theoretical background, state hypothesis and paper goal, explain the choice and use of the methodology, state results, discuss results and their impact on theoretical background, as well as possible applications; not necessarily in that order. Of course, the article should begin with an introduction and end with a conclusion.

There are many good articles which can help authors decide on an article structure and writing style (here are some of them): Your Paper, Your Way - now available to all journals: Becoming more author-friendly, 8 reasons I accepted your article, 11 steps to structuring a science paper editors will take seriously, Six things to do before writing your manuscript, Quick guide to Journal Writing, Guidelines on writing a first quantitative article, Theuns Kotze.

### ABSTRACT

The abstract should contain between 250 and 500 words. It should be concise and summarize the paper in order to attract the reader's attention. The abstract should introduce the reader to the topic, indicate the main goal of the research, suggest theoretical or empirical importance, brief description of methodology, and main findings and/or contributions to the field.

### REFERENCES

Every source used in the paper should be stated in the references. For references, please use Chicago style (The easiest way is to install Google scholar button in your browser, write the title of the source, click on ", choose Chicago style, copy the reference, and paste it into the template with the option *Keep the text only* - so you won't have to edit the font afterwards).

### FINAL PRE-SUBMISSION CHECK

Please, before submission, check: if the author's names are correctly written and in the right order, e-mail addresses, the name of institution, JEL codes, keywords, proper figure and table captions, spell-check and grammar-check, all references included and written in requested style, equations are all in .jpeg format, figures and graphs look good in black/white print.

### AFTER ACCEPTANCE

After the paper is accepted for publication and delivered to the editors in the final form, the paper will enter the publishing process where minor adjustments can be applied to the paper. After the publication of the Journal issue, authors will be notified and will receive a .pdf version of their paper, as well as one copy of the printed edition of the Journal.

"I have just been part of an adventure of discovery in science and I have found something that I want to share with you, the reader. In this article, I am going to take you on the same adventure and tell you what made me excited about it. In doing so I hope you will recognize and appreciate my scientific contribution." (Lindsay, 2011: 3)
